

Sahil Mohan Kolge

Full stack developer in Mumbai (React, Next.js, Node.js, Express, MongoDB). I build and deploy features end to end, keep business rules on the server, and design for what happens when data grows and requests collide. When something breaks in production, I find the real cause before I fix it. Passionate about leveraging AI-driven and agentic workflows to build smarter, more efficient digital experiences.

Projects

WorkSphere `work-sphere-web.vercel.app`

- Built role-based access control across 3 roles enforced in Express middleware and mirrored in the UI, with JWT httpOnly-cookie auth and forced password rotation on first login.
- Designed an org-hierarchy engine that enforces business rules server-side: one HR manager per department, no circular or employee-to-employee reporting chains. Exposed through an interactive d3-org-chart view.
- Built a CSV bulk-import pipeline that returns per-row success/failure reports and temp credentials for 50+ employee records, plus a Recharts dashboard for headcount, hiring trend, and active/inactive split.

Philkart `philkart-web.vercel.app`

- Built a Turborepo monorepo with shared workspace packages giving end-to-end type safety and fail-fast environment-variable validation across frontend and backend at startup.
- Implemented cursor-based (keyset) pagination for the product catalog to avoid offset-scan degradation at scale, plus a Node.js worker_threads background worker that generates synthetic catalog data via Faker.js without blocking the API event loop.
- Wrote type-safe REST APIs using Zod request schemas and centralized error-handling middleware, backed by a shared shadcn/ui design-token library with dark/light theming. Tooling via Biome and Turborepo build/typecheck pipelines.

Hacker News Clone `hacker-news-clone.vercel.app`

- Consumed the Algolia Hacker News REST API by composing query strings at runtime (tags, page, hitsPerPage, query, numericFilters) to drive search, sorting, date-range filtering, and pagination.
- Set up server-state caching with TanStack Query v5 using composite query keys for granular invalidation, with keepPreviousData holding results during page transitions to kill pagination flicker.
- Structured a Zustand v5 store whose action creators reset page index on filter change, preventing stale out-of-range pagination.

Urban Estate `urban-estate-web.vercel.app`

- Built a stateful auth pipeline (registration, email verification, password reset) using Zustand persist middleware so sessions survive reloads and users skip repeat authentication across routes.
- Implemented dual-role authorization with HOC-based React Router v7 route guards, keeping permission logic out of UI components.
- Added geo-spatial property discovery with Leaflet custom markers and a URL-synchronized filter system (useSearchParams) that serializes price, location, and sort into deep-linkable, history-aware queries.

E-Commerce `e-commerce-web.vercel.app`

- Integrated Razorpay checkout end to end across cart, wishlist, address CRUD, and order flows using secure httpOnly JWT sessions.
- Built a centralized Axios client layer with request/response interceptors for global error normalization and withCredentials auth propagation, removing per-call error handling.
- Wrote 30+ reusable data hooks that decouple API logic from UI, with React Hook Form + Zod schema-driven validation and skeleton loaders across a responsive dark/light Tailwind UI.

Skills

Core

HTML, CSS, JavaScript, TypeScript, Node.js, MongoDB, Agentic Coding

Frameworks & Libraries

React.js, Next.js, Express.js, Mongoose, Shadcn, Tailwind CSS, Redux Toolkit, Tanstack Query, SWR, React Hook Form, Zod, Formik, Yup, Zustand

Tools & Platforms

Git, GitHub, Figma, Claude Code

Certifications

React - The Complete Guide

<https://bit.ly/4ucSG57>

JavaScript

<https://bit.ly/4fvftWk>

JavaScript Projects

<https://bit.ly/4xdScyV>

Next.js

<https://bit.ly/4e8QxBJ>

Claude Code

<https://bit.ly/4e4xmc6>

Soft Skills

- Attention to Detail
- Problem Solving
- Collaboration & Teamwork
- Time Management
